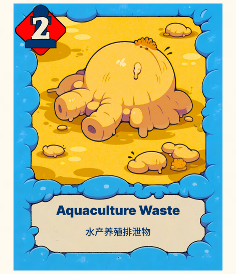
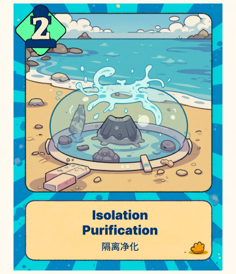
Basic Cleanup: 3 arbitrary purification cards or 1 intercept purification card (blue) to remove 2 squares of spreading contamination
Diffusion Trigger: If not cleared before the end of the next player's turn, it automatically spreads to 4 beach tiles (under normal conditions, the maximum is 6 tiles, equivalent to one 2∗3 large area).
Clearing After Diffusion: One Diffusion Purification Card (blue) can only clear 2 tiles of spreading pollution.
Outbreak Enhanced State: If there is no Diffusion Purification Card to counter a spreading pollution card, it will immediately spread to 4 beach tiles after placement.
Clearing Outbreak Enhanced State: One Diffusion Purification Card (blue) can only clear 2 tiles of spreading pollution.

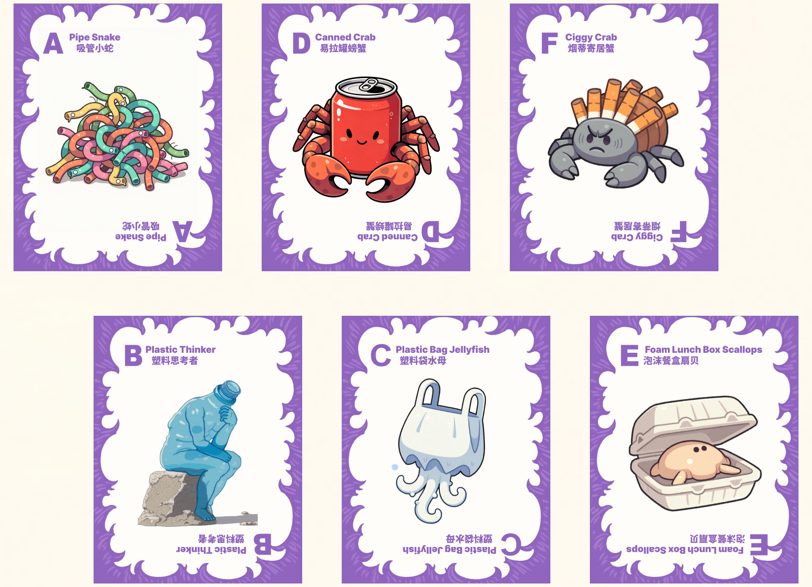
Interception and Purification

Includes: Pollution prevention, disinfection and sterilization, ecological degradation
Basic Effect: Remove 2 diffusion contamination tiles





Functional Purification Cards
(Total 41)



A Pipe Snake
吸管小蛇
D Canned Crab
易拉罐螃蟹
F Ciggy Crab
烟蒂寄居蟹
B Plastic Thinker
塑料思考者
C Plastic Bag Jellyfish
塑料袋水母
E Foam Lunch Box Scallops
泡沫餐盒扇贝

The Sea Drift Garbage card does not cause environmental pollution or have any purification effect. It is purely a tactical game card and can only be used to trigger player interactions, card dismantling, drawing, and countering mechanisms

Tactic 1: Consume 2 Drift cards — discard the opponent's hand

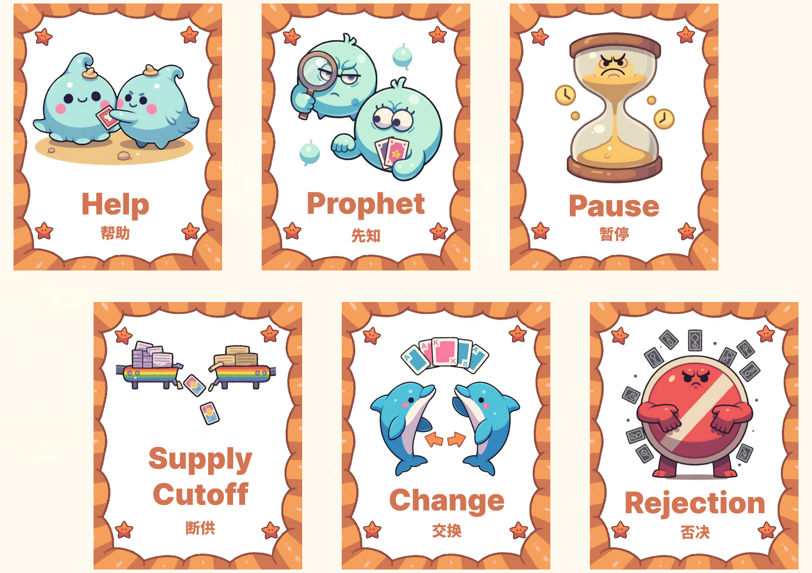
Spend 2 of your own Driftwood cards to randomly select 1 card from your opponent's hand and place it directly into the discard pile.

Tactic 2: Consume 3 Sea Drift Cards — Precision Specification Card Discard
Consume 3 Sea Drift cards and select any card specification of an opponent. Resolve according to the following priority:
1. If the opponent has a card of the specified type: our side randomly draws 1 such card and discards it;
2. If the opponent does not have a card of the specified type: trigger a countermeasure, causing the opponent to randomly draw 1 card of the same specification from our hand and discard it;
3. If neither side has a card of the specified type: trigger the Nightmare mechanism, allowing any neutral player on the field to randomly draw 1 card from each side and discard them

Tactic 3: Consume 4 Drift Cards — Plunder Opponent's Hand
Consume 4 Drift Cards to randomly draw 1 card from the opponent's hand and add it to your own hand for use.

Tactic 4: Consume 5 Sea Drift Cards — Advanced Specification Play
Consume 5 Sea Drift cards and designate any card specification of any player. Resolve according to the following priority order:
1. If the target player has a card of the specified type: your side draws 1 card of that specification into your hand;
2. If the target player does not have a card of the specified type: a counteraction is triggered, and the opponent draws 1 card of the same specification from your hand into their hand;
3. If neither side has a card of the specified type: the luck mechanism is activated, and both sides may each take 1 card of the corresponding specification from other players' hands or the common discard pile and add it to their hand.

Special Effect Cards
(Total 20)



The effects of all functional cards can be countered by nullification cards, and they only apply to player interactions, without interfering with the basic mechanisms of pollution, purification, or drifting debris

1. **Help Card (4 cards):** Designate a player to forcibly choose one card from their hand to give to you; can be countered
2. **Prophet Card (4 cards):** View any three cards from a selected player’s hand; can be countered
3. **Pause Card (4 cards):** Designate a player, preventing them from performing any actions during their next turn; can be countered
4. **Supply Cut Card (3 cards):** Designate a player, preventing them from drawing cards at the end of this turn or during their next turn; can be countered
5. **Exchange Card (2 cards):** Swap all cards in hand with any chosen player; can be countered.
6. **Veto Card (3 cards):** Ignores turn order and immediately nullifies the effect of any opponent’s functional card; effects can stack; only counters functional cards and cannot negate Pollution, Purification, or Drift Sea tactics.

Standard Round Complete Process

1. Card Playing Phase

Freely combine and play Pollution Cards, Purification Cards, and Function Cards. Sea Drift Garbage Cards must strictly follow the rigid rule of "Outbreak Pollution, Global Balance, limit of 1 card per turn."

2. Field Resolution Phase

Uniformly resolve all passive field effects on the board: all unblocked spreading pollution automatically spreads; all lingering pollution remains, maintaining its polluted state.

3. Ecology Resolution · End of Turn

Count the state of all players' sandboxes on the field. If a player has a 2∗3=6 grid completely polluted, that player must place 1 pollution token into the Ecological Purification Jar. Then, end the current turn and rotate the first turn position to the next player.

Mandatory Rules for Sand Table Sites

1. Each player has an independent sandbox consisting of a fixed area of 4∗6=24 grids. By default, each grid can only hold one type of pollution, and multiple pollution types cannot overlap.
2. Definition of a clean grid: a blank grid with no pollution markers and no enhanced buffs.
3. Diffusive pollution can only spread to adjacent blank grids, and grids that are already polluted cannot be covered a second time.

Victory and Defeat Determination Rules

Victory Core Item: Ecological Purification Pot
Initial State: All players' ecological pots are initially clear and uncontaminated.
Game Situation: When a player’s 2∗3=6 grid is fully occupied, the player must place one contaminated piece into their pot. Once four pieces have been placed into the pot, that player is eliminated.
Final Victory Condition: The player who persists until the end wins.
